Error Analysis:

ERROR_SUMMARY: The script fails with a KeyError when attempting to select the columns ['skin_tone', 'alternative_skin_tone', 'expert_opinion'] from the test DataFrame. These columns exist in the training set but are missing from the test set, so test[feature_cols] raises an error because pandas cannot find these columns in test.csv.

SUGGESTED_FIX:

Before selecting feature columns from the test set, check which feature columns are actually present in test.csv and only select those. Adjust feature_cols for the test set to include only columns that exist in test, or fill missing columns with default values (e.g., NaN) to ensure alignment between train and test features.

... [truncated, 9818 chars total]

Error Analysis:

ERROR_SUMMARY: The error occurs because the hyperparameter 'model.image.checkpoint_name' is not recognized in the current AutoGluon MultiModal configuration, resulting in a KeyError during model training. This suggests that the correct key for specifying the image backbone checkpoint has changed, or the model expects a different configuration structure (e.g., 'model.mmdet_image.checkpoint_name' or similar). As a result, the model cannot be trained with the provided hyperparameters.

SUGGESTED_FIX: Remove or update the 'model.image.checkpoint_name' hyperparameter in your predictor.fit() call. Refer to the latest AutoGluon MultiModal documentation or use introspection (e.g., print available config keys) to determine the correct key for setting the image backbone (commonly 'model.mmdet_image.checkpoint_name' for image tasks). If unsure, omit this override and rely on the default backbone, or set only supported hyperparameters such as 'env.num_gpus' and 'model.trainer.max_epochs'.

+ huggingface-hub==0.36.2
+ hyperopt==0.2.7
+ idna==3.15
... [truncated, 15179 chars total]

Error Analysis:

ERROR_SUMMARY: The error occurs because the DataFrame passed to ``predictor.predict_proba`` contains both the original image feature column (e.g., 'image_name') and an additional 'image_path' column, resulting in multiple image columns. AutoGluon expects only one image column (typically named 'image_path' or the same as used during training), and when more than one is present, its type inference logic fails, leading to `AttributeError: 'DataFrame' object has no attribute 'tolist'`.

SUGGESTED_FIX: Ensure that the DataFrame you pass to ``predictor.predict_proba`` contains only one image column (the same as used during training, usually 'image_path') and does not include both 'image_name' and 'image_path'. Remove any extra image-related columns from the test DataFrame before prediction, so that only the required features (including 'image_path') are present.
