Error Analysis:

ERROR_SUMMARY: The error occurs because the trained AutoGluon Tabular model expects the same feature columns at prediction time as were present during training. Specifically, columns ['super_label', 'skin_tone', 'alternative_skin_tone', 'expert_opinion'] were present in the training data but are missing from the test data, resulting in a KeyError during feature transformation.

SUGGESTED_FIX:

Ensure that the test (and any prediction) DataFrame passed to the predictor contains all feature columns used during training, even if their values are unknown. Add the missing columns to the test DataFrame with default or placeholder values (e.g., NaN or a neutral value) before calling `predict_proba`. This will align the test data schema with the training data and prevent the KeyError.

... [truncated, 9905 chars total]

Error Analysis:

ERROR_SUMMARY: The error occurs because the hyperparameters `model.late_fusion` and `model.late_fusion_model` are not recognized by the current version of AutoGluon MultiModal. These keys are not present in the configuration schema, resulting in a `KeyError` when the model attempts to apply them as overrides during training.

SUGGESTED_FIX:

Remove the `model.late_fusion` and `model.late_fusion_model` entries from the hyperparameters dictionary. Rerun the script with only supported hyperparameters (such as `model.timm_image.checkpoint_name`, `optim.loss_func`, and related loss parameters) to resolve the configuration error and allow model training to proceed.
